## // WHY IT MATTERS

## Why it matters

Every organisation has a different risk appetite, budget and infrastructure; there is no single security solution for all.

Measuring where you are and identifying the highest-impact steps lets you spend your resources in the right place.

## // WHO IS IT FOR?

## Who is this service for?

Organisations wanting an independent assessment of their security posture

Teams without a security function or with a new one

Managers who need to set investment priorities

Companies planning mergers, transformation or cloud migration

## // SCOPE

## What does it cover?

### Maturity assessment

We measure your security posture against recognised frameworks such as the NIST Cybersecurity Framework.

### Security architecture review

We review your network, identity, endpoint and cloud architecture from a security perspective.

### Risk analysis

We prioritise risks by business impact and present treatment options.

### Vulnerability management

We design the process for regular detection, prioritisation and closure of vulnerabilities.

### Third-party risk

We support assessing risks that come from third parties and suppliers.

### Executive reporting

We prepare clear reports and strategy for the board and senior management.

## Think like an attacker, build like a defender.

## // METHOD

## How we work

1

### Discussion and scope

We listen to your business goals and expectations and define the scope.

2

### Current-state analysis

We review documents, architecture and applications and interview the relevant teams.

3

### Assessment and prioritisation

We rank findings by risk and business impact.

4

### Roadmap

We present a short- and long-term implementation plan that can be budgeted.

5

### Implementation support

If you wish, we stay with you while the roadmap is implemented.

## // DELIVERABLES

## What do we deliver?

- ✓ Maturity assessment report
- ✓ Prioritised risk list
- ✓ Executive summary and presentation

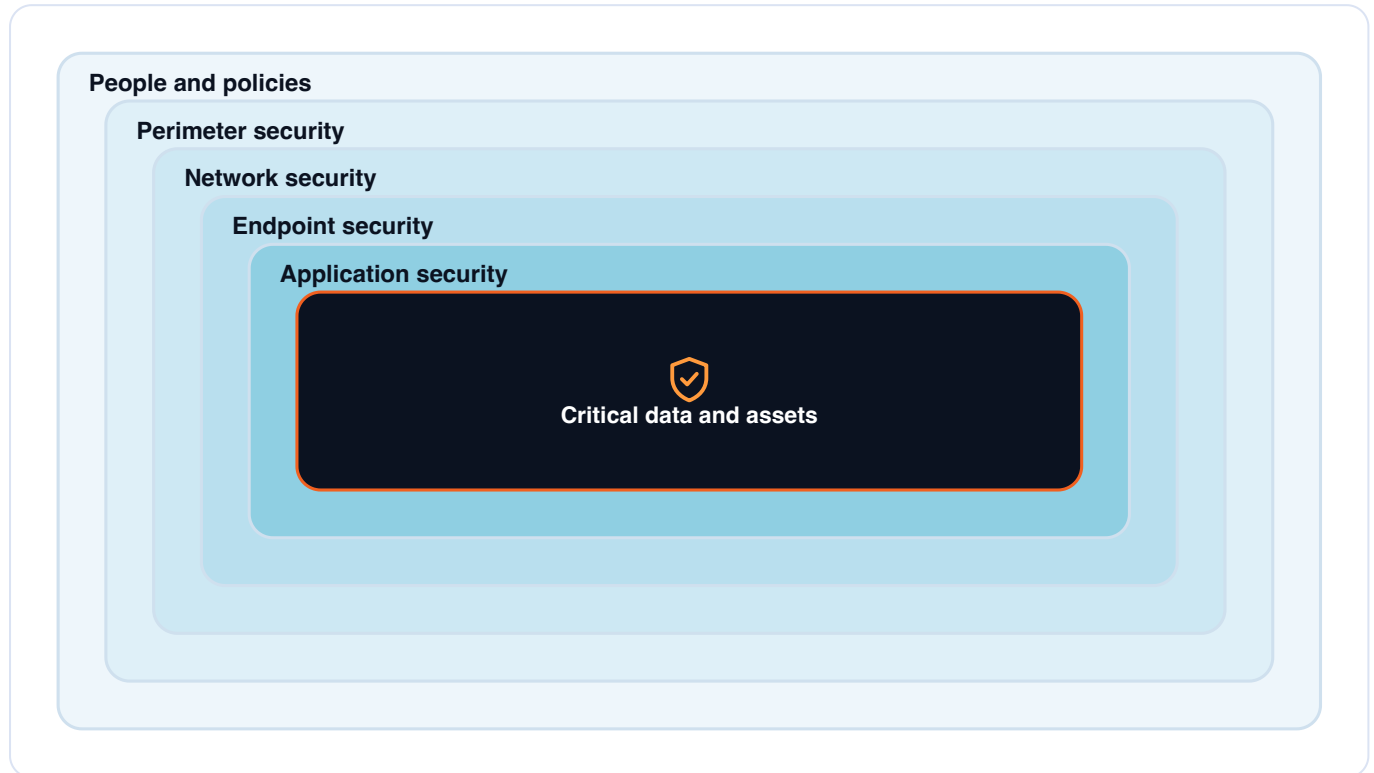

- ✓ Security architecture review findings
- ✓ Vulnerability management process design
- ✓ Phased action plan

## // VISUAL GUIDE

## Service-specific visuals

### Defense in depth

Instead of relying on a single control, complementary layers protect assets even if one layer is breached.

**No single point of failure**

Even if one control is bypassed, the next layer slows or stops the attacker.

**People are a layer**

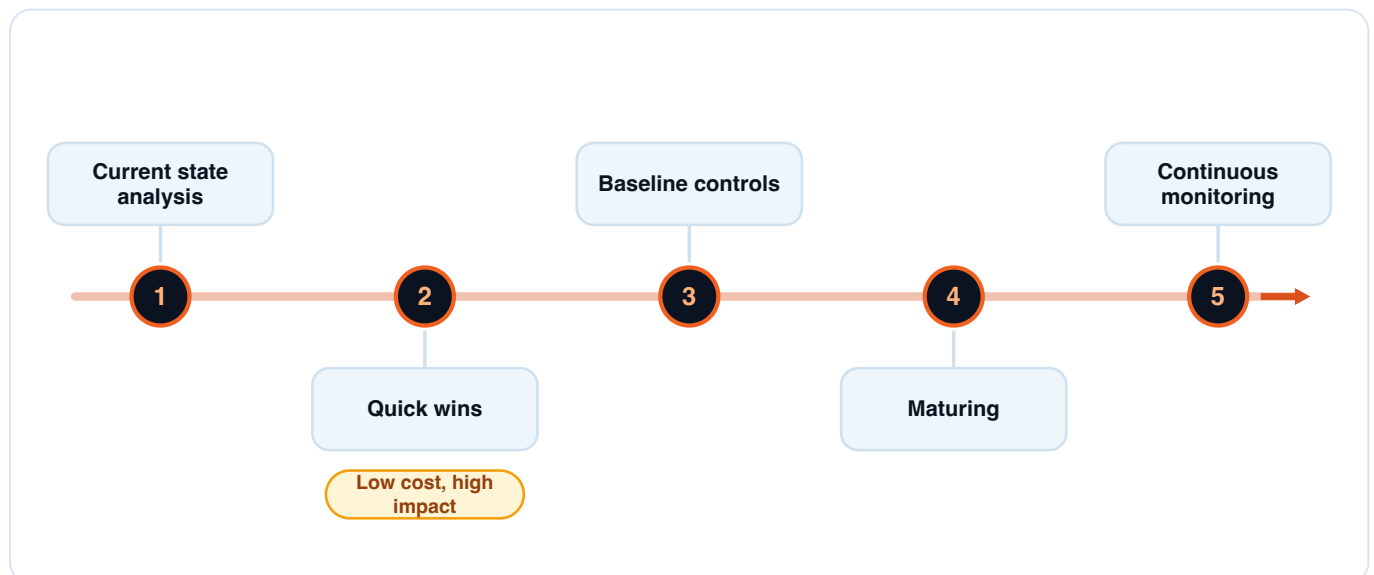

Policies and awareness complement technical controls.

**Data at the core**

Layers are positioned to protect critical data and assets.

### Prioritised security roadmap

Steps ordered by risk priority, from the current state to the target maturity.

**Starts from today**

Where you are is measured first; targets are set against it.

**Quick wins**

Low-cost steps that cut risk noticeably come first.

**Measured progress**

Maturity is reassessed at each stage and the roadmap is updated.
