

MANAGEMENT & COMPLIANCE

Risk Management Consulting

We identify and rate your information and cyber security risks using ISO 27005 and ISO 31000 approaches, and turn them into a prioritised risk treatment plan.

// WHY IT MATTERS

Why it matters

Investing in security without linking it to risk means spending resources in the wrong places. Regular, methodical risk management shows which asset faces which threat and what to close first.

It is also the foundation of standards such as ISO 27001.

// WHO IS IT FOR?

Who is this service for?

Organisations preparing for ISO 27001 or ISO 22301 certification

Organisations in a KVKK compliance process

Those who need to present risk reports to the board

Those who want to manage supplier and third-party risk

// SCOPE

What does it cover?

**Asset inventory and classification**

We identify your information assets, their owners and their business value.

**Threat and vulnerability analysis**

We identify the possible threats to your assets and the weaknesses that exist today.

**Risk assessment**

We rate likelihood and impact and classify risks against your acceptance criteria.

**Risk treatment plan**

We turn the options of reduce, transfer, accept or avoid into a plan with owners and target dates.

**Supplier and third-party risk**

We help you assess the risks coming from suppliers and service providers.

**Risk register and reporting**

We set up the risk register and prepare clear reports and presentations for management.

Think like an attacker, build like a defender.

// METHOD

How we work

1

Scope and context

Together we define your risk appetite, the scope and the assessment criteria.

2

Asset and risk identification

We identify assets, threats and existing controls through workshops and documents.

3

Analysis and rating

We rate and prioritise risks by likelihood and impact.

4

Risk treatment

We prepare a treatment decision and an actionable plan for each risk.

5

Monitoring and reassessment

We set up a periodic review process so the risk register stays current.

// DELIVERABLES

What do we deliver?

Risk register

Risk treatment plan

Executive summary and presentation

Risk assessment report

Input for the ISO 27001 Statement of Applicability (SoA)

Risk assessment methodology document

// VISUAL GUIDE

Service-specific visuals

The risk management process (ISO 31000 approach)

Risk management is not a one-off analysis but a repeating process from scope to monitoring.

**A cyclical process**

Each round uses the previous one's outputs as input, so the risk register stays current.

Criteria first

Without agreed risk appetite and acceptance criteria up front, ratings are inconsistent.

Linked to management

Results are reported in a form management can decide on.

Risk matrix and treatment priority

Each risk is rated by likelihood and impact; the top-right risks are treated first.

**Sets priority**

Top-right risks are treated first; effort goes to the highest risk.

A shared language

The technical team and management speak through the same matrix.

Aligned with ISO 27001

Results feed the risk treatment plan and the SoA.
